## Respiratory Disease Surveillance Report Jefferson County, Missouri

**Week 46: November 9, 2025- November 15, 2025**

**OVERVIEW:** The Jefferson County Health Department (JCHD) monitors influenza and other respiratory pathogens, including COVID-19, throughout Jefferson County, Missouri. The Jefferson County Health Department conducts influenza surveillance using passive surveillance and syndromic surveillance. Although influenza illness can occur year-round, the seasonal influenza reporting begins on the Morbidity and Mortality Weekly Report (MMWR<sup>1</sup>) Week 40 of a given year and continues through MMWR Week 20 of the following calendar year. COVID-19 surveillance began in March 2020 and case reporting continues year-round. COVID-19 data reflects cases that are entered into Missouri's communicable disease database. *All data and information are conditional and may change as more reports are received.*

---

<sup>1</sup> Data is reported in epidemiologic weeks established by the CDC's Morbidity and Mortality Weekly Report (MMWR). The MMWR week starts on a Sunday and ends on Saturday. Values for MMWR week range from 1 to 53, although most years consist of 52 weeks.

## INFLUENZA SURVEILLANCE

### Passive Surveillance

**Table 1. Number of Laboratory-Positive<sup>2</sup> Influenza Cases by Week, Jefferson County, Missouri**

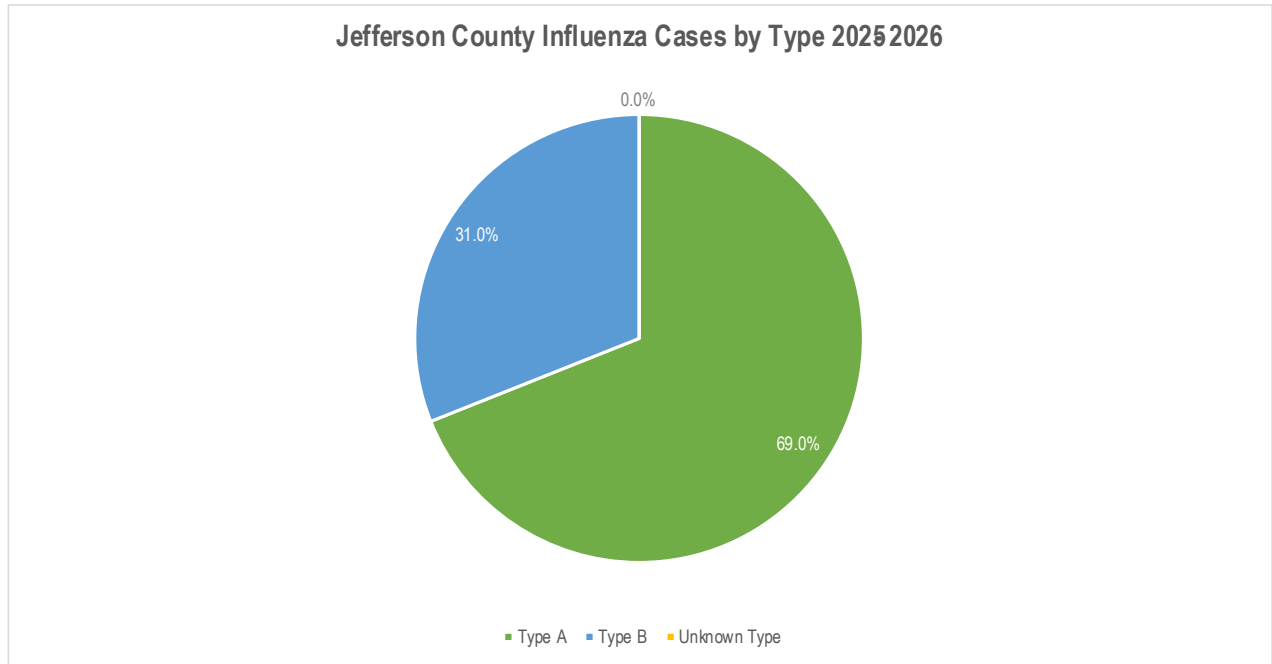

CDC Reporting Week	Week Start Date	Type A	Type B	Unknown Type	Week Total
40	9/28/2025	2	3	0	5
41	10/5/2025	1	0	0	1
42	10/12/2025	1	0	0	1
43	10/19/2025	4	0	0	4
44	10/26/2025	2	2	0	4
45	11/2/2025	2	2	0	4
46	11/9/2025	5	2	0	7

**Table 2. Number of Laboratory-Positive Influenza Cases by Age Group, Jefferson County, Missouri**  
For Cases Reported 11/9/2025- 11/15/2025

Jefferson County Influenza Cases 2025-26					
Age Group	Type A	Type B	Unknown Type	Total	% Total
00 to <02	3	0	0	3	10.3%
02 to 04	2	0	0	2	6.9%
05 to 14	5	5	0	10	34.5%
15 to 24	0	1	0	1	3.4%
25 to 49	2	0	0	2	6.9%
50 to 64	5	2	0	7	24.1%
65+	3	1	0	4	13.8%
<b>TOTAL</b>	<b>20</b>	<b>9</b>	<b>0</b>	<b>29</b>	<b>100.0%</b>

<sup>2</sup> Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

Jefferson County, Missouri**  
For Cases Reported 11/9/2025- 11/15/2025

**Figure 2. Number of Laboratory-Positive Influenza Cases by Week, Influenza Seasons 2022-23 to 2025-26, Jefferson County, Missouri**

**Jefferson County Influenza Outbreaks**

No influenza outbreaks have been reported in Jefferson County as of Week 46.

**Jefferson County Influenza Deaths<sup>3</sup>**

No influenza-associated deaths have been reported in Jefferson County as of Week 46.

<sup>3</sup> All influenza-associated deaths became reportable in Missouri in 2016.

## COVID-19 SURVEILLANCE

**Table 3. Number of Confirmed and Probable COVID-19 Cases by Week, Jefferson County, Missouri**

CDC Week	CDC Week Start Date	Covid-19 Cases	Cumulative Covid-19 Case Total
40	9/28/2025	55	55
41	10/5/2025	45	100
42	10/12/2025	49	149
43	10/19/2025	41	190
44	10/26/2025	43	233
45	11/2/2025	52	285
46	11/9/2025	58	343

### **Passive Surveillance**

Influenza is a reportable condition in the state of Missouri. JCHD conducts passive influenza surveillance by collecting and aggregating data on all laboratory-positive influenza tests in Jefferson County residents. Passive surveillance provides information on the true burden of influenza illness in Jefferson County but is limited by variations in testing and reporting practices. If diagnostic tests are not conducted on patients presenting to health care providers with influenza-like-illness, or if test results (e.g., of rapid influenza tests) are not reported to JCHD, those persons will not be included in the passive surveillance data. Thus, passive surveillance is likely an underestimate of the true burden of influenza illness in Jefferson County. Passive surveillance helps the health department to keep track of the incidence of influenza cases in the community and facilitates early detection of potential outbreaks.

### **Syndromic Surveillance**

JCHD uses the ESSENCE system to conduct syndromic surveillance for Influenza-Like-Illness (ILI) at Missouri hospital emergency departments (EDs). ESSENCE captures data on all ED visits in persons with chief complaints (rather than final diagnoses or positive laboratory tests) of ILI. ILI chief complaints are those which include the word “influenza” or those that the ESSENCE system parses to [fever and (cough or sore throat)]. The syndromic surveillance data presented above include all ED visits for ILI from those with a Jefferson County residential address. Data from private physicians, clinics, or urgent care centers are not included in ESSENCE. Syndromic surveillance contributes to our understanding of the burden of influenza experienced by the healthcare system, as well as demonstrating the relative impact over time of influenza with respect to other illnesses.
